FIG. 2B

(A) (From Fig. 2A)

225 Process intersystem page request, including WCI parameter, received at border switches of anchor switch

227 Border systems page mobile station; mobile station responds to page of one of the border switches

229 Idle radio facilities available in serving border switch?

231 If call has immediate preemption priority, abort an existing non-priority call and assign its radio channel to this new incoming call

233 If call does not have immediate preemption priority, place call in queue and start preemption (if applicable) and queue timers

235 When idle radio facilities become available, assign radio facilities to highest priority queued call

237 If preemption timer expires, abort an existing non-priority call and assign its radio channel to the preempting call

239 If the queue timer expires and the call has preemption priority, abort an existing non-priority call and assign its radio channel to the call

241 For any call to which a radio channel has been assigned, continue with call set-up
